### **EXAMINER'S AMENDMENT**

The application has been amended as follows:

#### **In the claims**

##### Claim 1.

Claim 1 is amended.

##### **In claim 1, page 2, line 6:**

Line 6 has been changed to read as follows:

--from a plurality of products within a product category with an assistance of one or more--

##### Claim 6.

##### **In claim 6, page 3, line 1:**

#### ***Drawings***

New corrected drawings are required in this application because Figures 1-2, 7, 10-12, 13-15 and 19 contain improper hand written text, which may affect clarity when reproduced.

***Information Disclosure Statement***

The information disclosure statement (IDS) submitted on December 15, 2008 is being considered by the examiner.

**REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance:

Claim 1

The prior art of record neither anticipates nor is obvious in fairly and reasonably teaching a method of formulating individualized product recommendations comprising, *inter alia*: classifying the consumer, based on the inputs, in a population of consumers who previously used a product in the product category in connection with a substantially similar substrate and who are substantially similar to the consumer.

The most closely applicable prior art of record is U.S. Patent No. 6,029,195 to Herz. Herz discloses a system that automatically constructs both a "target profile" for each target object (col. 1, lines 20-22). A "target profile interest summary" for each user, which target profile interest summary describes the user's interest level in various types of target objects. The system then evaluates the target profiles against the users' target profile interest summaries to generate a user-customized rank ordered listing of target objects most likely to be of interest to each user so that the user can select from among these potentially relevant target objects. (Col. 1, lines 24-32) Users' target profile interest summaries can be used to efficiently organize the distribution of information in a large scale system (col. 1, lines 34-38). Herz further discloses basic

types of clustering such as association-based clustering. Association-based clustering, in which profiles contain only associative attributes, and thus distance is defined entirely by associations. This kind of clustering generally clusters target objects based on the similarity of the users who like them or clusters users based on the similarity of the target objects they like. (Col. 24, lines 40-47) (See Board Decision of April 10, 2009) However, Herz is silent to the classifying the consumer, based on the inputs, in a population of consumers who previously used a product in the product category in connection with a substantially similar substrate and who are substantially similar to the consumer.

Claim 103

Claim 103 recites a computer-readable medium having a program with computer-executable instructions for performing steps comprising, *inter alia*, classifying the consumer, based on the inputs, in a population of consumers who are substantially similar to the consumer and who previously used a product in the product category in connection with a substantially similar substrate. This computer-readable medium is allowable over the prior art of record for reasons consistent with those identified above with respect to claim 1.
